

A Recipe for Satisfaction All Around

Higher MyChart Activation = Lower Office Phone Traffic!

When your patients use MyChart, they don't need to call the office as often for:

- Appointment requests
- Medication refill requests
- Questions they want to ask a healthcare provider
- Help in remembering their next appointment time

MyChart lets your patients find this information and more—quickly, easily and securely. That's a win for patients AND health providers!

Remember: Please ask each patient if he or she has activated a MyChart account.

Pediatric practices: Tell parents that they can view their child's information from their own MyChart account by setting up proxy access after they've activated accounts for themselves and each child.
