

## **Hypospadias**

Hypospadias is a condition where the meatus, opening where the urine comes out, is located on the underneath side of the penis. Hypospadias is a common condition affecting one out of every 250 to 300 boys born. In some instances, if the hypospadias is not treated it can result in:

1. An abnormal appearance of the penis
2. Difficulty standing to use the toilet during urination
3. Abnormal curvature of the penis during erections
